

## Operators

- \* symbols ["punctuation", informally speaking] that work with keywords to form expressions
- \* variables assignment: =
- \* arithmetic: + - \* / % +=
- \* Relational: == != < > <= >=
- \* Logic[al]: || && !

## Expressions

Make use of operators and variables to form small statements..

```
int $i = $j + $k;
```

```
float $f = 2.718;
```

```
int $ang = 375 % 360; // modulus
```

```
int $k = ($j == $r); // result is always 0 or 1
```

```
int $v = ( ($f == $a) && ($g < $s) );
```
